

## Editing Med X Change videos on Apple Computers

### **Installing Flip4Mac into QuickTime for MAC:**

Med X Change videos are stored in high quality MPEG-4 WMV files. They will open and play in almost any computer. However, Apple users will want to take the extra time to convert these files to something that they can edit and manipulate for Power Point or Keynote in the Apple native format. To do this, please follow the instructions below:

### **Downloading Flip4Mac:**

- Go to <http://www.flip4mac.com>
- Click on BUY
- Under Option1 – Click on Download Flip4Mac WMV
- Click “Download Now”
- This will install the trial software and automatically start the install

### **Install Demo Version:**

- With the installer open click “Continue”
- Then click “Continue” again
- Then click “Continue” again
- Then click on “Agree”
- Select your destination drive (installation drive) and click “Continue”
- Then click “Install”
- The system will request to restart the computer. Click “Yes”
- Then reboot the MAC

### **Upgrading Demo To Full Version:**

- Now click on the Apple icon on the your computer
- Click on System Preferences
- Flip4Mac WMV will be listed at the bottom under “Other”
- Follow the instructions for Upgrading
- We recommend *Studio PRO* but *Studio* should be all you need
- You can reference this website [http://www.flip4mac.com/wmv\\_upgrades.htm](http://www.flip4mac.com/wmv_upgrades.htm)

### **Editing and Playing WMV on MAC:**

- Now you can open your Med X Change videos in your favorite Mac software.
- Edit your videos and save the edited clips as MOV or anything you want.
- Now you are ready to add them to your Power Point or Keynote Presentation software.

If you have, further questions please contact:
